

Truly Permanent Hair Removal

Since 1875, electrolysis remains the only hair removal procedure recognized as truly permanent by government regulatory agencies. It works by sliding a fine probe in the hair follicle and applying current adjusted both to hair type and treated area. One is then able to thoroughly destroy the germinative cells responsible for hair growth.

The creators of **Apilus®** designed an innovative computer-assisted system that concentrates and controls the extent of destruction at the bottom of the hair follicle. This translates into a treatment that is at once effective, gentle and safe.

The Gentle Way to
Permanent Hair Removal

APILUS

The gentle way to permanent hair removal. Don't settle for anything less!

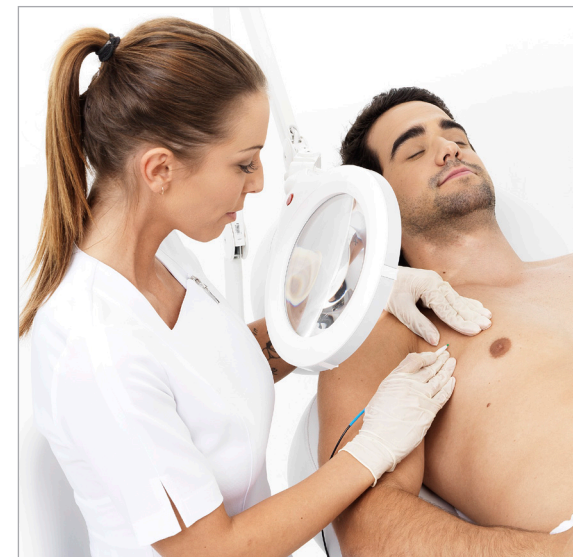

A Smart and Effective Technology

Apilus® has become synonymous with uncompromising quality in the field of hair removal. Already available in countless locations throughout the world, **Apilus®** devices deliver permanent results in the most efficient and comfortable way possible.

Unlike light- or laser-based protocols, **Apilus®** electroepilation technology can conveniently and successfully be applied on anyone, whatever their skin and hair colors. Owing to the localized nature of its action, hair on the face and near the eyes can also be removed safely and without inconvenience.

Thanks to its intelligent settings and overall sterling performance, **Apilus®** allows for pinpoint precision to guarantee the results you seek, so you can finally say goodbye to unwanted facial or body hair.

High Standards of Care

Wherever you find **Apilus®**, the very best in hair removal is made available to you, through the alliance of the trained hand of the professional and the power of ultramodern technology.

With **Apilus®**, efficiency does not come at the expense of comfort or safety. Thanks to the constant refinement of our application techniques and of our range of sterilized, disposable probes, you can rest assured that you are in good hands.
